

A photograph of three business professionals sitting around a table in a modern office setting. A woman on the left is smiling, a man in the center with glasses is resting his chin on his hand and smiling, and a man on the right is also smiling. The background shows a bright office with large windows. The text 'SOLVING MEETING ROOM AUDIO' is overlaid in large, bold letters, with 'SOLVING' and 'AUDIO' in yellow and 'MEETING ROOM' in white. The man in the center is circled with a thin white line.

SOLVING MEETING ROOM AUDIO

for the hybrid workforce

Getting the right audio system is more important than ever

In the new era of hybrid work, we can expect that many in-person meetings will continue to have a high number of remote participants. That makes clear, reliable meeting room audio more important than ever. And as the checklist below shows, there are a lot of other factors to consider – from minimizing costly installs to simplifying device management.

8 must-haves for today's audio

- 1. Full-room microphone coverage for maximum flexibility
- 2. Meeting participants can move and speak naturally and still be heard
- 3. Easily outfit large and open spaces for meetings at a reasonable cost
- 4. Automatically calibrate to reflect changes in room setup
- 5. No need for specialized technicians to install or adjust equipment
- 6. Limited number of components to install and manage
- 7. Fewest demands on IT resources for maintenance and troubleshooting
- 8. No-touch design to limit physical contact with shared devices

1

Designed for flexibility

Getting conventional microphone systems to perform under changing conditions can be complicated and expensive. Nureva® audio with patented Microphone Mist™ technology is the easy way to get full-room coverage that picks up voices no matter where people sit, stand or move in the room.

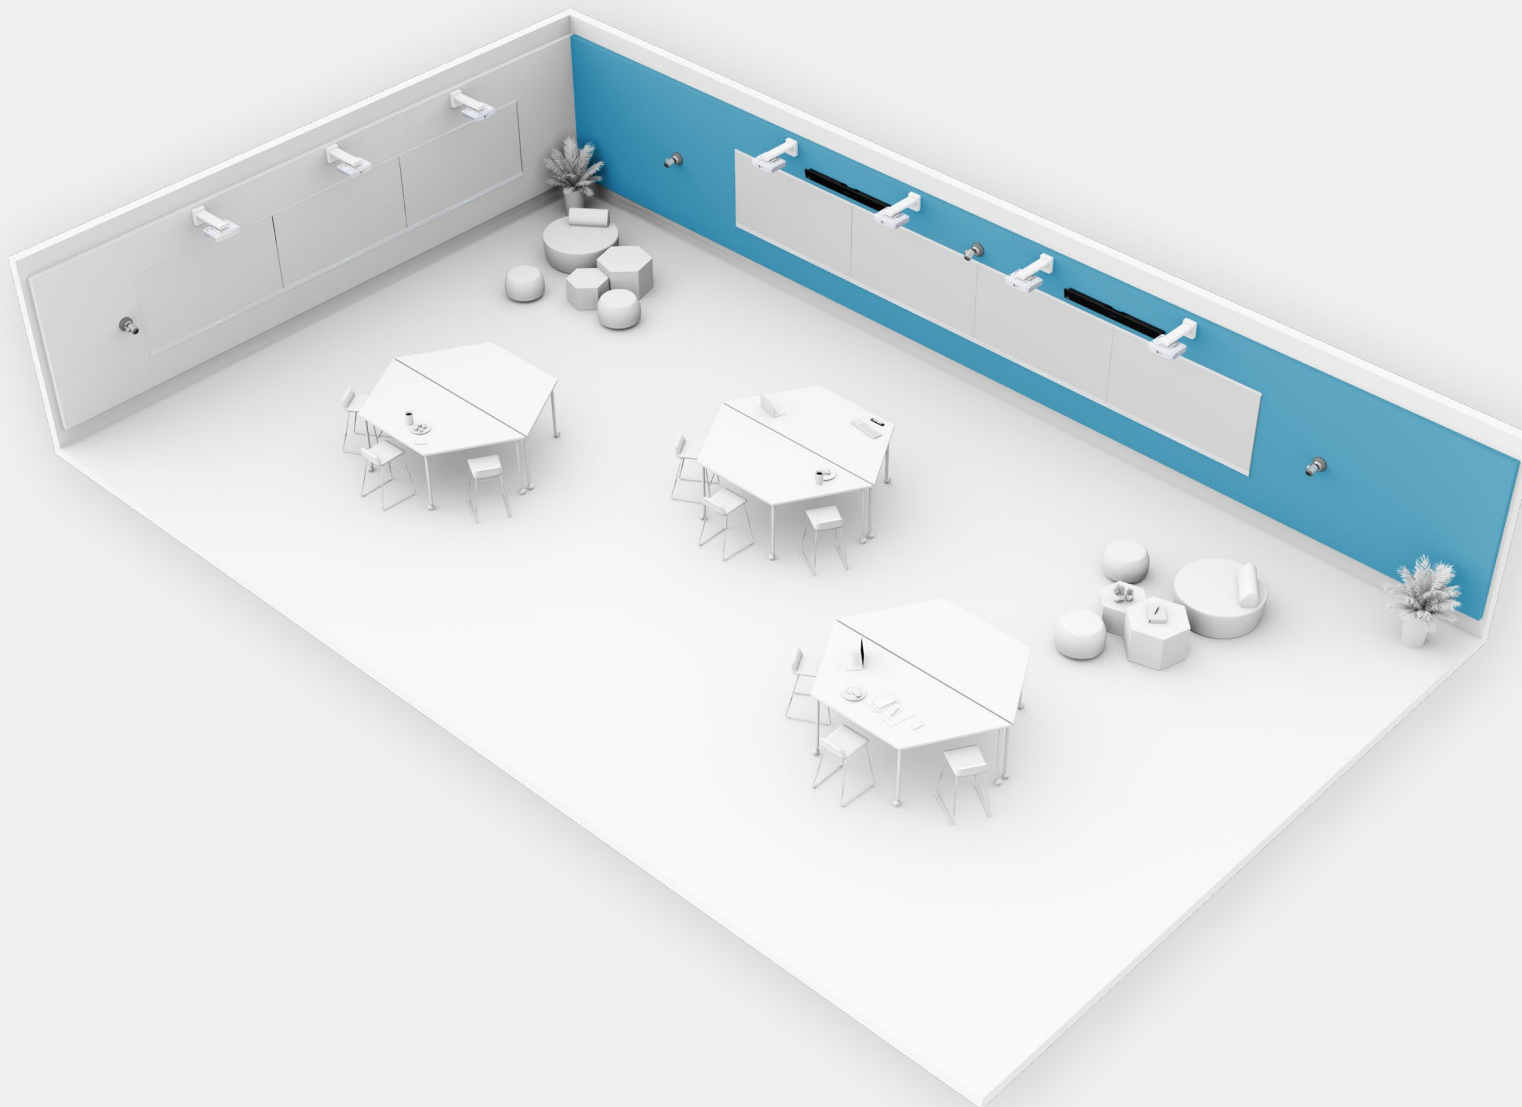

2

Users can act naturally

Many conventional systems require instructions or even training for users on how they need to change their meeting room behaviors (where they sit, which way they face, not talking at the same time, etc.) to ensure their voices are heard by remote participants. Nureva audio lets team members act and converse naturally so they can get on with their meetings.

3

Audio for large spaces for less

Getting proper microphone coverage in large or open spaces with conventional audio systems can be difficult and expensive. With Nureva audio, just two microphone and speaker bars provide complete coverage in spaces up to 30' X 50' (9.1 x 15.2 m) – for a fraction of the cost of traditional systems.

4

Ready for the next change – and the ones after

If your spaces need to be reconfigured, Nureva audio just adapts. There's no need to make system adjustments or install new components – continuous autocalibration means the system does the work for you.

5

No need for specialized technicians

Nureva audio is so easy that there's no need to bring in outside personnel for installation or adjustments. You hang each Nureva microphone and speaker bar on the wall with two screws in less than an hour, and calibration is automatic.

6

One easy system for all your spaces

Some conventional systems require a variety of types of microphones, speakers and other components. And you may have to customize the setup for each room. With Nureva audio, one easy system works for almost any space.

7

More time for other IT priorities

Installing or adjusting complicated conventional audio systems can take up a lot of your time. And then there are the support calls. Nureva audio gives you back the time you need for higher value priorities by reducing implementation complexity while increasing user satisfaction.

8

No-touch design

The tabletop and single-user mics of some conventional systems get touched a lot. Nureva audio systems hang on the wall so there's one less thing to sanitize.

Nureva audio checks all the boxes

- ✓ 1. Full-room microphone coverage for maximum flexibility
- ✓ 2. Meeting participants can move and speak naturally and still be heard
- ✓ 3. Easily outfit large and open spaces for meetings at a reasonable cost
- ✓ 4. Automatically calibrate to reflect changes in room setup
- ✓ 5. No need for specialized technicians to install or adjust equipment
- ✓ 6. Limited number of components to install and manage
- ✓ 7. Fewest demands on IT resources for maintenance and troubleshooting
- ✓ 8. No-touch design to limit physical contact with shared devices

“We were so impressed with the sound quality, ease of install and ease of use of the HDL300, it was a no brainer for us to adopt it.”

Jimmy Yan, principal collaboration engineer, HubSpot

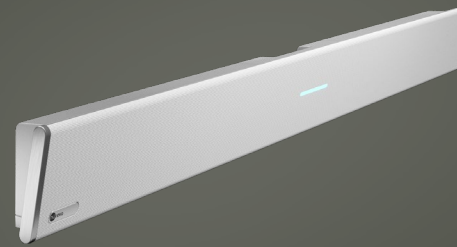

For all your spaces

HDL200

- For small rooms
- 4,096 virtual microphones provide full-room coverage in spaces up to 18' x 18' | 5.5 x 5.5 m
- Easy installation in around 30 minutes

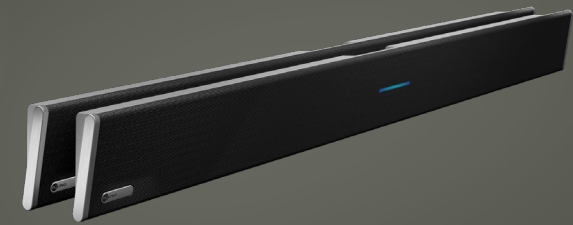

[Learn more](#)

HDL300

- For mid-size rooms
- 8,192 virtual microphones provide full-room coverage in spaces up to 25' x 25' | 7.6 x 7.6 m
- Easy installation in around 30 minutes

[Learn more](#)

Dual HDL300

- For large rooms and open spaces
- 16,384 virtual microphones provide full-room coverage in spaces up to 30' x 50' | 9.1 x 15.2 m
- Easy installation in around 60 minutes

Microphone Mist technology

Microphone Mist™
technology

Our patented technology fills a room with thousands of virtual microphones so everyone can be heard everywhere in a space. It also enables unprecedented simplicity, because one or two easy-to-install microphone and speaker bars give you the coverage and audio performance you need without the high cost and hassles of complicated multicomponent systems.
